

Keeping Up With Coastal Eye Associates...

EYES ON COASTAL

March 2020

Tip Of The Month:

When talking to a patient about Optos photos, please be careful not to advertise that it will replace dilation. While it *can* often take the place of dilation, that is decided on a case by case basis. There are plenty of times when the patient may still require dilation, such as with diabetics, new patients, checking for cataracts, patients with really small pupils, when the Optos photos don't capture enough of the periphery, and more. Either way, Optos photos are still very useful, and are highly recommended, as they provide wider views and increased magnification of smaller details, and offer photodocumentation of findings for future reference.

Happy
St. Patrick's Day!
